Step 1: Welcome Screen

Use the Startup Wizard to set up your security system. The Startup Wizard lets you customize basic settings, network settings, application settings, record settings, and HD settings.

This screen will appear on your monitor when you turn on the NVR/DVR. You will need to complete these quick and easy steps to set up the basic functions of your device. Use the included USB mouse to make your selections on the screen.

We recommend that you do the following before starting:

- Plug in the USB mouse.
- Connect the cameras to the NVR/DVR.

Note: Have a pen handy to write down information such as your user name and password. Do not pause for a long period while using the Startup Wizard, or it will time out and you will need to re-enter your information.
Step 2: User Name and Password Registration

To help keep your system secure, you should create an administrator user name and password to access your system. Be sure to write down this information at the end of this guide and store it in a secure location. (For better security, you might want to keep your password in a separate document.)

![Image of User Name and Password Registration]

Using the mouse, click in a text field to display the onscreen keyboard. Click outside the keyboard when you have finished typing.

- **User name**: Change this your preferred user name.
- **Password**: Enter a password that you will use to log in to the NVR/DVR. Passwords are case sensitive.
- **Retype Password**: Enter the same password as above.

Once you have written down your user name and password at the end of this guide, select the **Next Step** button to move on.
Step 3: Network and System Settings (Manual)

Refer to the Network Quick Setup Guide or the network settings in the manual for details on configuring the Network Settings. Make sure that the NVR/DVR is plugged directly into your internet router or modem.

- The IP address/DNS server information can automatically be obtained by the NVR/DVR if it is connected to the router/modem. If automatically obtaining the IP Address/DNS server, make sure that you have selected “Obtain an IP address automatically” and “Obtain DNS server address automatically.”

- If manually entering the IP Address/DNS server, make sure that you have selected “Use the following IP address” and “Use the following DNS address” and enter the correct information.

Once you have changed the settings to fit your needs, select Next Step.
Step 3: System General Configuration (Manual)

If you have chosen a manual network configuration you should configure the basic settings on your NVR/DVR to ensure that it will display the information in the correct, time and date.

Time Tab

- **Date/Time**: Select a date format and the current date. Select a time format and enter the current time. If you select the 12-hour format, you will need to differentiate between AM and PM.
- **Date format**: Use the drop-down menu to choose the way you would like the date displayed.
- **Time format**: Use the drop-down menu choose the way you would like the time displayed.
- **Time zone**: Use the drop-down menu to choose the time zone in which you are located. If you have already manually changed the date/time, it will change again to reflect the time zone you chose.
- **Auto update**: Check this box if you would like the NVR/DVR to automatically update the date/time if your network is configured.
- **Time server**: You will generally not need to change this setting. This is the web address that retrieves the date and time for automatic updates.
Step 4: System General Configuration (cont.)

DST Tab

- **Enable**: Check this box if you would like to enable the Daylight Saving Time settings.
- **Mode**: Depending on the Daylight Saving Time settings, you can choose between the exact date and the week.
- **Offset**: Depending on the Daylight Saving Time settings, you can choose between one hour and two hours. Generally this should be set to one hour.
- **From**: This is the date/time that Daylight Saving Time will begin.
- **To**: This is the date/time that Daylight Saving Time will end.

Once you have changed the settings to fit your needs, select the **Next Step** button to move to the next step.
Step 5: Using Owl Scan™ For Mobile Access

Setting up access on your phone or tablet has never been easier! With our one step Owl Scan feature, just scan the onscreen QR code with the built-in Night Owl Pro app and you are set for mobile access.

The first step is ensuring that you have a working internet connection. Click the Test button when prompted to verify.

Once your network is verified you will need to install the Night Owl Pro app on your mobile device. Download the Night Owl Pro app from the App Store or Google Play Store before proceeding.

Click Next Step when you are ready.
Step 6: Adding a Mobile Device

Once the Night Owl Pro app is installed and your internet connection is verified, you are ready to add your mobile device to your system.

1. Open the Night Owl Pro app on your device.
2. Press the + button located in the upper right corner of the app.

Add a New Device

Scan the QR code onscreen to complete your mobile device set up.
Step 6: Mobile Access Confirmation

Once the QR code is scanned, you’ll receive a confirmation screen with all of your device settings.

App Confirmation Screen

Select the device you just configured from the list displayed on the app screen; you’ll be taken to the live view once completed.

Congratulations! Your Night Owl security system is now configured! Please refer to the User Manual or visit us at www.NightOwlSP.com for further support.
